***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9 and 14-19, drawn to conotoxin peptides, compositions containing them and methods of their use.

Group II, claim(s) 10-11 and 13, drawn to nucleic acids encoding conotoxins.

Group III, claim(s) 12, drawn to antibodies directed against conotoxins.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the general concept is conotoxins comprising the sequence SGTVGR, or such a sequence which has undergone one or more amino acid substitutions or side chain modifications. Since such sequence which have undergone one or more amino acid substitutions are known in the art (E.g., conotoxins MVIIA, MVIIBGVIA, GVIIA, etc.,), the general concept cannot be considered a special technical feature. PCT Rules 13.1-13.2 do not provide for multiple products.

This application contains further claims directed to the following patentably distinct compounds, (which have different primary structures) of the claimed invention: specific peptides of SEQ ID NO: 5-32, specific nucleic acids encoding these peptides and antibodies directed against each of these peptides. Applicant is required under 35 U.S.C. 121 to elect a single disclosed compound for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. The Examiner will examine an identified protoxin

Art Unit: 1653

along with the mature form. Currently, claims 1-4, 8-9 and 14-19 of Group I and all claims of II-III are generic.

Applicant is advised that a reply to this requirement must include an identification of the peptide, nucleic acid or antibody that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election

**This further election requirement is not be construed as a species election, as these compounds do not share a common primary structure and appear to be patentably distinct.**

Should applicant traverse on the ground that these different compounds are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1653

application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
